A leading GREEN institution of higher learning in the global community by 2030

(Good governance, Research-oriented, Extension-driven, Education for Sustainable Development, and Nation-building)

Process Analysis and Design

Originally, the proposed beneficiary of the system was the DHSUD-MIR Bacolod Office, which focuses on regulatory and compliance processes. However, due to need for approval from the HR central office, the project could not proceed immediately. As advised by the capstone professor, the team selected a more accessible beneficiary, the Talisay City Housing Authority (TCHA), which operates at the local level and handles direct housing services.

Because of this change, the system processes were also modified. The focus shifted from regulatory monitoring (DHSUD) to operational process (TCHA), such as managing Informal Settlers Families (ISF), processing housing applications, and assigning housing units.

Several enhancements were introduced. The system now includes ISF Monitoring as the core process, which was not emphasized before. The housing application process was improved by adding eligibility checking, status tracking, and unit assignment. Housing project monitoring was enhanced to include real-time tracking of unit availability. Document management was integrated with applications to ensure better tracking and verification. Case management was also improved through proper recording and monitoring of concerns. Lastly, reporting was enhanced through an analytics dashboard that provides real-time data.

Overall, the changes improved the system by making it more integrated, automated, and suitable for the actual needs of the new beneficiary.
