

The Integrated Housing Services and Monitoring System has a clean, simple, and professional look and feel suitable for a government office. The system uses a blue, white, and gray color scheme, with a sidebar and top navigation layout that makes it easy for users to navigate different modules. The interface is designed to be organized, minimal, and data-focused to help staff easily understand, manage, and monitor housing-related information.

1. **Dashboard Module** has a clear and informative look using cards and charts. It feels like a control panel where users can quickly see important information at a glance. Its function is to display summarized data such as total ISFs, applications, housing units, and cases to support quick monitoring.
2. **ISF Monitoring Module** has a structured table layout with search and filter features. It feels organized and easy to use, similar to a registry system. Its function is to register, update, categorize, and manage Informal Settler Family records and generate ISF statistics.
3. **Housing Application Management Module** uses tables and colored status badges. It feels systematic and allows users to easily track the progress of applications. Its function is to record applications, link them to ISF records, and monitor application status from submission to completion.
4. **Document Management and Tracking Module** has a clean table with status indicators. It feels straightforward and helps users quickly identify missing or verified requirements. Its function is to track document submissions, verify requirements, and monitor compliance of applicants.
5. **Housing Project and Unit Monitoring Module** uses card-based layouts with progress indicators. It feels visual and easy to understand. Its function is to manage housing project details, monitor unit availability, and assign housing units to approved applicants.
6. **Case Management Module** uses color-coded cards and tables. It feels organized and helps users quickly identify case categories and status. Its function is to record, categorize, and track housing-related concerns or complaints until resolution.
7. **Analytics and Reporting Module (Supporting Component)** uses charts and report views. It feels analytical and supports decision-making by presenting summarized data clearly. Its function is to generate reports and provide insights based on data from all modules, serving as a support tool for management and decision-making.
